

ABSTRACT OF THE DISCLOSURE

1 Disclosed herein is a wheel balancing device having a plurality of wheel balancing weights
2 attached to a top surface of an elongate tape, and a backing strip removably attached to and
3 protecting an adhesive layer on the bottom surface of the tape. The backing strip is serrated below
4 the grooves separating the individual wheel balancing weights to facilitate separation of the
5 individual weights quickly and easily. Each backing strip serration may be in the shape of a lift tab
6 or finger grip to further ease removal of the backing strip from the adhesive layer on the bottom
7 surface of the tape.
